Dashboard Design Plan — Electronics Retail Sales Analytics

This document plans each dashboard page before building it: its purpose, required visuals, the measures each visual needs, and relevant findings from the SQL analysis phase worth featuring. Built page by page, in order, to avoid rework and keep measures reusable.

Page 1: Executive Overview

Purpose: High-level KPIs for C-suite executives (COO, VP Sales)

Visual	Measures needed
KPI Cards: Revenue, Profit, Margin %, Orders, AOV, YoY Growth	Total Revenue, Total Profit, Profit Margin %, Total Orders, Avg Order Value, YoY Growth %
Revenue Trend Line Chart (monthly)	Total Revenue (by month)
Category Performance Matrix	Total Revenue, Profit Margin % (by category)
Channel Distribution Donut	Total Revenue (by channel)
Top 5 Stores Bar Chart	Total Profit (by store, top 5)

Relevant finding to feature: Online drives volume but several physical flagship stores (Mumbai Phoenix, Chennai Phoenix Marketcity) are more profit-efficient per sale.

Page 2: Sales Deep Dive

Purpose: Product and category performance analysis

Visual	Measures needed
Top 10 Products Bar Chart	Total Revenue (by product)
Category Sales Treemap	Total Revenue (by category)
Brand Performance Column Chart	Total Revenue, Profit Margin % (by brand)
Price vs Profit Scatter Plot	Unit Price, Profit Margin % (by product)
Product Performance Table	Revenue, Profit, Margin %, Units Sold

Relevant finding to feature: Laptops are the most profitable category (8.4%-8.6% margin) despite lower revenue than Mobile Phones/Televisions, which are high revenue but low margin.

Page 3: Store Performance

Purpose: Store-level operational metrics

Visual	Measures needed
Store Sales Comparison Bar Chart	Total Revenue (by store)
Geographic Sales Map	Total Revenue (by city, limited to 5 cities)
Store Type Performance Donut	Total Revenue (by store type)
Store Ranking Table	Revenue, Profit, Margin % (by store)
Online vs Physical Comparison Cards	Total Revenue, Profit Margin % (split online/physical)

Relevant finding to feature: Hyderabad Inorbit Mall underperforms the network at 5.47% margin. Store profitability doesn't correlate with store type or size.

Page 4: Customer Analytics

Purpose: Customer segmentation and lifetime value

Visual	Measures needed
Customer Segmentation Scatter Plot	Total Revenue, Total Orders (by customer)
Top 10 Customers Table	Customer Lifetime Value

Visual	Measures needed
Customer Distribution by Segment	Note: customer_segment field is flat/non-varying, may need to substitute or omit
Repeat Customer Rate KPI	Repeat Customer Rate
New vs Returning Customers Trend	Total Orders (by registration cohort, if feasible)

Data quality note: customer_segment has no variation (single value "electronic" for all 1,000 customers), so segment-based visuals need a workaround or should be simplified.

Page 5: Channel & Payment Analysis

Purpose: Multi-channel and payment insights

Visual	Measures needed
Channel Performance Cards	Total Revenue, Profit Margin %, AOV (online vs in-store)
Payment Method Distribution Bar Chart	Total Transactions (by payment method)
Channel Mix Trend Area Chart	Total Revenue (by channel, by month)
Average Transaction by Payment Method	Avg Transaction Value (by payment method)

Relevant finding to feature: Payment method has minimal impact on order value, all 14 methods cluster within a narrow range (₹38K-₹42K average).

Page 6: Operational Dashboard

Purpose: Order fulfillment and efficiency

Visual	Measures needed
Order Status Funnel Chart	Total Orders (by order_status)
Fulfillment KPI Cards (Delivery, Cancellation, Return rates)	Fulfillment Rate, Cancellation Rate, Return Rate
Salesperson Leaderboard Table	Total Revenue, Total Orders (by salesperson) — note: placeholder names in this data
Delivery Performance by Store	Fulfillment Rate (by store)

Relevant finding to feature: Overall fulfillment rate (75.68%) matches the company's baseline. Online has a meaningfully higher problem rate (6.77%) than In-Store (4.98%), the clearest lever toward the 82% target.

Master Measure List (build once, reuse across pages)

- Total Revenue = SUM(fact_sales[total_amount])
- Total Profit = SUM(fact_sales[profit_amount])
- Profit Margin % = DIVIDE([Total Profit], [Total Revenue])
- Total Orders = DISTINCTCOUNT(fact_sales[order_id])
- Avg Order Value = DIVIDE([Total Revenue], [Total Orders])
- YoY Growth % = (calculated using SAMEPERIODLASTYEAR or similar time intelligence)
- Customer Lifetime Value = Total Revenue (by customer, via table/visual context)
- Repeat Customer Rate = DIVIDE(customers with 2+ orders, Total Customers)
- Fulfillment Rate = DIVIDE(Delivered Orders, Total Orders)
- Cancellation Rate = DIVIDE(Cancelled Orders, Total Orders)

- Return Rate = DIVIDE(Returned Orders, Total Orders)

Colour Palette

Role	Color	Hex
Primary (headers, key bars/lines)	Deep Teal	#0F6E6C
Secondary (supporting elements)	Slate Grey	#4A5A5C
Background	Off-White	#FAFAFA
Text	Charcoal	#2B2B2B
Positive/good margin	Fresh Green	#5B9E3F
Negative/underperforming	Muted Red	#C0524A
Neutral accent (highlights)	Warm Sand	#D9A566

Design Details

- Canvas: 1280x720 standard widescreen
- Colors: Deep Teal primary, Slate Grey secondary, Off-White background, Charcoal text, Fresh Green positive, Muted Red negative, Warm Sand accent
- Typography: Vendana (Semibold for titles, Regular for body)
- Numbers: Western format (K/M/B)
- Navigation: custom buttons (not default tabs), good learning opportunity
- Chart labels & filter placement: decided contextually per page/chart as we build
